

Urban Policies to Combat Climate Change: Assessing the Impact of Congestion Pricing and Low-Emission Zones using Machine Learning Techniques

Ferdinand Loser*

July 19, 2026

Course: *Machine Learning in Econometrics*

Supervisor: Prof. Daniel Wilhelm

Ludwig-Maximilian University of Munich, M. Sc. Economics Program

Executive Summary

Abstract content goes here. This section should provide a concise summary of the research question, methodology, key findings, and implications of the study. It should be clear and informative, allowing readers to quickly understand the purpose and results of the paper.

1 Introduction

2 Theoretical Background

3 Results

	Sprawling Regional Hubs	Dense Progressive Metropolises
National Climate Pact Participation	0.080000	0.410000
Temperature Anomaly	0.400000	0.120000
Population per square kilometre	1561.630000	3999.820000
Indicator: coastal city (1=yes)	0.420000	0.220000
City area (km2)	592.190000	361.650000
City population	518540.400000	803388.790000
Green Party Vote Share	0.250000	0.320000
Latitude Zone	2.190000	1.710000
GDP per capita (EUR, 2020 prices)	35235.020000	43283.930000
Environmental NGO Activity Index	45.900000	56.160000
